Julia in Jupyter Notebook

Step 1:
Use this link: https://julialang.org/downloads/ and download the appropriate version.
Step 2:
Install Julia and then double click on the icon.
You will get a Julia prompt.
Step 3:
Enter the following lines of code:
Pkg.add("IJulia")
(It may take some time to install the required packages)
Step 4:
After the installation finishes, enter the following code:
```
using IJulia
notebook()
```
(Jupyter notebook will open in your browser)

Troubleshooting:
You might end up getting a kernel error when you open a Julia notebook.
Execute the following code:
Pkg.update()
Pkg.build("IJulia")
Using IJulia; notebook()
